The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. cDNA iblary Preparation: M.B. Soares Lab Clone distribution: NCI-CGAP clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at:

synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an BCOR I adaptor, digested with Not I, and cloned directionally into pTTT3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the CAT18 tail. The sequence tag for this library is CCATTAAGTG. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

single-stranded DNA preparation of NCI CGAP Subs was used as a tracer in a subtractive hybridization with a driver comprising; a pool of clones from NCI CGAP Subs (INAGE clone lds 273283-277415, 3068040-3065191; 25% of the driver population), a pool of clones from NCI CGAP Sub4 (INAGE clone lds 2723892-2773356; 25% of the driver population), NCI CGAP Sub6 (pool AIF-AJU, INAGE lds 2728969-2733190; 25% of the driver population), and NCI CGAP Sub6 (pool AIF-AJU, INAGE lds 30681864-3081850; 25% of the driver population). Subtraction was performed as previously described [Bonaho, Lennon & Soares (1996): Normalization and Subtraction: Two Approaches To Facilitate Gene Discovery. Genome Research 6, 791-806.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This is a "working draft" sequence. It currently
* consists of 22 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repears; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GHR7, send mailto:egreen@nhgri.nih.gov/ or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The library is from This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu) using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is fro

one male donor.

The clone may be obtained either from Genome Systems, Inc (http://www.genomesystems.com) or Research Genetics, Inc. (http://www.resgen.com); or from Pieter de Jong.

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP4-814D15. Actual start of
this clone is at base position 1 of RP5-1142J19; actual end is at
base position 96975 of RP5-1142J19.

transposon was identified in the cloning vector for RP5-1142J19. Location/Qualifiers

* NOTE: This is a "working draft' sequence. It currently
* consists of 15 contigs. The true order of the pieces
* is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                                                                                                                                                                 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with ris sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with thair source databases:

Em:, EMBL: Sw.: SWISSROT; Tr:, TREMBL: Wp:, WORNPEP; Information on the WORNPEP database can be found at the work anger ac.uk/Projects/C_elegans/wormpep This sequence chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at the chromosome 1 mapping Group. ```
regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 10); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

This sequence was generated from part of bacterial clone contigs of human chromosome 22.

Mapping Group. Further information can be found at http:/www.sanger.ac.uk/HGP/Chr22

This sequence is the entire insert of clone CTA-57G9 The true right end of clone RPS-11779 is at 100 in this sequence.
     Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the Workner database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep CTA-57G9 is from the human BAC library described in U-J. Kim et al. (1996) Genomics
                                                                                                                                                                                                                                                                                                     This sequence was finished as follows unless otherwise noted: all

Numquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
on Feb 5, 1998 this sequence version replaced gils5nlate.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                19592 TCCTGACCTCGTGATCCGCCCGCCTCAGCTTCCCAAAGTGCTGGGGATTACAGGCATGAGC 19651

Submitted (27-JUL-2000) Sanger Centre, Hinxton, Cambridgeshire,
CENO 15A, UK. Emaile mquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
On Jul 1, 2000 this sequence version replaced gi:8546617.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the
sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Emm:, EMBL; Sw:, SWISSPRCT; Tr:, TREMBL; Wp:, WGRMPEP; Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 20, constructed by the Sanger Centre Chromosome 20 Mapping Group. Further information can be found at Mttp://www.sanger.ac.uk/RgY/Chr20 Rpping Group. Further information can be found at RPII-125P18 is from the library RPCI-11.1 constructed at the

              This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeates; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                          Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the Genbank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    'note="T substituted in clone: GS1-180123"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mapping information for this clone was provided by Dr. John D. Merbherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Ihao, B., Frengen, B., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center: Washington University Genome Sequencing Center

The clone sequenced to the left is RP11-45120, 2000 bp overlap; the clone sequenced to the right is RP11-173M11. Actual start of this clone is at base position 108871 of RP11-45120; actual end is at base position 123291 of RP11-279K24.

NEIGHBORING SEQUENCE INFORMATION:

VECTOR: pBACe3.6

```
Unresolved tandem repeats exist between 44681 and 46316.
Polymorphisms exist between AC096659, AC0110771 and AC104070. Data
from AC110771 was used to finish AC104070.
                                                    The sequence of AC068461 has been incorporated into AC104070

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           * NOTE: This is a 'working draft' sequence. It currently consists of 5 conigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence is as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó

It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Insert size: 165000; agarose-fp

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                       US-09-972-032-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
Sequence 2, Application US/09875114

Patent No. 6670333

GENERAL INFORMATION:
APPLICANT: No. 6670331 Bouck
APPLICANT: No. 6670331 Bouck
APPLICANT: Dow. 6670331 Bouck
APPLICANT: David Dawson
APPLICANT: Paul Gillis
TITLE OF INVENTION: Methods and Compositions for Inhibiting Angiogenesis
TITLE PERERENCE: 0290-23U2
CURRENT FILING DATE: 2001-06-06
PRIOR APPLICATION NUMBER: US/09/875,114
CURRENT FILING DATE: 1998-07-23
PRIOR FILING DATE: 1998-07-23
PRIOR FILING DATE: 1998-07-23
PRIOR FILING DATE: 1997-07-23
NUMBER OF SEQ ID NOS: 2
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 2
LENGTH. 22484
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GENERAL INFORMATION:

The invention relates to isolated polymucleotide (I) and polypeptide (II) cas useful as hybridisation probes, polymerase chain recordin (FCR) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed corivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polymucleotide sequences have applications in polypeptide and polymucleotide sequences have applications in diagnostics for generating equences have applications in diagnostics for generating disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic conding sequences. AAS64197-AAS94564 represent novel human diagnostic conding sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in the way of the invention and the printed specification, but was obtained in the way way and the and produces are appear in the printed specification, but was obtained in the way and sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MetCysGlyArgProArgArgValSerAlaGlyCysGlyPheAlaAspAlaHisTrpThr

                                                                                                                                                                                                                                                                                    The invention relates to a ERCoA3 (Estrogen Receptor Coregulator 3) protein and encoding polynucleotides. ERCoA3 can be used to inhibit or reduce tamoxifen or estrogen induced proliferation of cancer cells, by reduced activity of ERCoA3, and for detecting cancer cells that are ERCoA3 in cells. The encoding polynucleotide can be used to inhibit translation of a mRNA encoding ERCoA3. ERCOA3 acts as a coregulator protein and can bind to the estrogen receptor to activate a molecular or cellular response in the cell. The present sequence represents the human

The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotides and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polynucleotides, polypeptides and preventive interventions. The polynucleotides, polypeptides and treat the cancers and proliferative disorders such as neoplasia, dysplasia and hyperplasia
                                                                                                                                                      Library of polynucleotides for diagnosing a cancerous state of a mammalian cell and detecting cancer, particularly of the colon or prostate, comprises 3351 human polynucleotide sequences.

                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents the BamHI-DNA insert of the recombinant clone pMptb #48 and encodes a 36K antigen of Mycobacterium paratuberculosis. The DNA sequence and its fragments are useful as hybridisation probes and amplification primers for detecting nucleic acid specific for the genus Mycobacterium, particularly for diagnosis of infection, especially by M. paratuberculosis which has been implicated in diagnosis and for vaccine development. The

```
c testing the animal for the presence of a parentally imprinted

quantitative trait locus (QTL). The pig QTL is located at chromosome 2,

mapping at around position 2pl.7. Also described are: (1) an isolated

and/or recombinant nucleic acid (N1) comprising a parentally imprinted

CC QTL or its functional fragment; (2) an isolated and/or recombinant

conclude as pig selected (N2) comprising a synthetic parentally imprinted QTL derived

from at least one chromosome or its functional fragment; (3) an animal

csuch as pig selected for having desired genotypic or potential phenotypic

properties; (4) a transgenic animal comprising N1 or N2; and (5) sperm or

an embryo derived from the animal of (3) or (4). N1 or its fragment is

useful for selecting an animal destined for slaughter or a breeding

conjunt having desired genotypic or potential phenotypic properties. The

properties are related to muscle mass and/or fat deposition. The sperm or

an embryo are useful in breeding animals destined for slaughter. AAA65418

to AAA65524 represent contigs 1 to 10 and 19 to 115 which were isolated

from porcine BAC-PIGF2-1 which contains the INS and IGF2 (insulin-like

growth factor) genes. These sequences where used in an example from the

present invention for generating a reference sequence of IGF2 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonornhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records AB237706-AB242016 represent nucleic acid molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Selecting a domestic animal for having desired genotypic properties comprises testing the animal for the presence of a parentally imprinted quantitative trait locus which is related to muscle mass and/or fat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method (M1) for selecting a domestic animal for having desired genotypic properties. The method comprises
                                                 New protein from Neisseria gonorrheae, useful for the manufacture of a medicament for treating or preventing N. gonorrheae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Porcine, pig; wild boar; quantitative trait locus; QTL; chromosome 2; mapping; 2p1.7; select breeding; genotype; phenotype; muscle mass; fat deposition; IGF2; insulin-like growth factor 2; ds.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid choosing a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of agens in an operon required for challer for proliferation, or that inhibits cellular proliferation; (6) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or which each of the strains is present in a culture or collection of required for proliferation of an organism. The antisense nucleic acids are useful for the discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. prewonnia or P. aeruginosa. The present sequence is one of the target or prokaryctic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in cellectronic format directly from WIPO at:

Monitoring differential expression of genes in filamentous fungal ce uses fluorescence-labeled nucleic acids isolated from the cells and uses fluorescence labeled nucleic acid substrate of expressed sequence tags.

Claim 88; Page 2176-2177; 3161pp; English.

The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the F cells and a substrate of expressed sequence tags (BST). The ESTS or are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the Same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microcoganisms to be improved. New genes may be discovered, of possible functions of unknown open reading frames can be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using ESTS provides several advantages over genomic or random CDNA clones including elimination of redundants ation of the microarrays based on function of the gene copy and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF01478 to AAF11873 represents ESTS from Aspergillus niger; AAF11873 represents ESTS from Aspergillus oryzae, and AAF11873 represents ESTS from Aspergillus result and pages and present in the present invention

                       RESULT 10
AAH48630/c
                                                                     The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of required for proliferation, or that has an activity against a biological pathway in which a proliferation or the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibitiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or strains; or (13) identifying the strains is present in a culture or collection of a crains; or (13) identifying the extent or proliferation of an organism. The antisense nucleic acids are useful for a proliferation of an organism. The antisense nucleic acids are useful for a proliferation of an organism. The antisense nucleic acids are useful for a proliferation of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         drug discovery programs, or for screening homologous mucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumonnae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational

This invention describes a novel nucleic acid (I) encoding an MLP (not defined) which has a 1273 base pair (bp) sequence (I) that includes a mutation at base 10 in exon 2 or the third position of codon 112 in exon 4, is new. The product of the invention has cardiant activity and can be used for gene therapy. (I), and related nucleic acids or probes, are used in diagnosis of and/or screening for mycardial diseases (or probes, are used predisposition), especially dilatative cardiomyopathy. Both specified mutations are associated with development of these diseases. Antibodies (Ab) raised against MCP and other peptides encoded by (I) can be used similarly. Also the regulatory region (III) of the genomic MLP sequence (optionally when incorporated into vectors or cells) is used in gene cherapy, specifically for prevention and/or treatment of cardiovascular disease, particularly those which involve a point mutation in a gene encoding sarcomer, dystrophin or cardial actin, e.g. hypertrophic cardiomyopathy. Into green provides muscle specific gene regulatory region of the MLP gene provides muscle specific gene regulatory region of the MLP gene provides muscle specific gene regulatory region of the MLP gene provides muscle specific gene cardiomyopathy.

The present invention describes an isolated phytase protein (I). (I) can be used for improving the nutritional value of a phytate-containing todstuff, by contacting the phytate-containing foodstuff with (I), where the enzyme catalyses the liberation of inorganic phosphate from the phytate-containing foodstuff, and so improving the nutritive value of the contacted foodstuff. The liberation of inorganic phosphate occurs prior to or after the ingestion of phytate-containing foodstuff by a recipient or producing an animal feed, by transforming a plant, plant portion or plant cell with a nucleic acid expression vector, comprising (II), culturing the plant, plant portion or plant cell with a nuclein is expressed and converting the plant, plant portion or plant cell into a composition suitable for animal feed. The animal is preferably a monogastric animal or a ruminant. (I) and (II) are useful in commove excess phytate from the environment or a sample. (I) reduces the environment. The present sequence encodes a phytase from the present

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated polypeptide for its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation or that that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the strains is present in a culture or collection of strains; or (13) identifying the taxget of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to rosteening for homologous mucleic acids required for proliferation to rosteening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, cultured for proliferation in cells other than S. aureus, S. typhimurium,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zyskind JW;

The present invention describes an isolated phytase protein (1). (1) can be used for improving the nutritional value of a phytate-containing foodstuff, by contacting the phytate-containing foodstuff with (1), where the enzyme catalyses the liberation of inorganic phosphate from the phytate-containing foodstuff, and so improving the nutritive value of the contacted foodstuff. The liberation of inorganic phosphate occurs prior to or after the ingestion of phytate-containing foodstuff by a recipient organism. Nucleotide sequences (11) encoding (1) can be used for
K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

producing an animal feed, by transforming a plant, plant portion or plant the plant, plant portion or plant cell with a nucleic acid expression vector, comprising (II), culturing the plant, plant portion or plant cell under conditions in which the phytase protein is expressed and converting the plant, plant portion or plant cell into a composition suitable for animal feed. The animal is preferably a monogastric animal or a ruminant. (I) and (II) are useful in animal feed and feed supplements as well as in treatments to degrade or remove excess phytate from the environment or a sample. (I) reduces phytate levels in animal manure and so reduces the phosphate pollution of the environment. The present sequence encodes a phytase from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence may be used to produce a recombinant protein comprising alpha-antigen and B-cell epitope of the HIV-1 aga antigen prigon product is useful in vaccine production eg. tuberculosis. A live vaccin such as M.bovis BCG or M.smegmatis has a low toxicity and long lasting such as M.bovis BCG or M.smegmatis has a low toxicity and long lasting

The compositions are antiallergic, dermatological, antiantial antiathmatory and ophthalmological. The antigen and its encoded gene are for producing drug compositions in treating allergic conjunctivitis. The drug compositions are made from the protein that can inhibit production of interleukin-4, ameliorate Th2-type cytokine-predominate immune state and relieve symptoms of allergic diseases such predominate immune relates and eosinophilic infiltration. The present sequence represents the encoding sequence for a mycobacterium-originated alpha antigen. This encoding sequence does not encode the protein featured (ABB83662) despite being said to do so in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Medicinal use of Mycobacterium-originated alpha-antigen or its gene in treating allergic diseases e.g. atopic dermatitis, asthma, allergic rhinitis and allergic conjunctivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antiallergic, Dermatological, Antiasthmatic; Antinflammatory, Ophthalmological, Mycobacterium-originated alpha antigen, allergic disease; atopic dermatitis; asthma; allergic rhinitis; allergic conjunctivitis; interleukin-4; Th2-type cytokine; IgE production; histamine; eosinophilic infiltration; gene; ss.
